

I CLAIM:

1. A steam cleaner comprising:
a container including a chamber formed therein,
a steam generator received in said chamber of said container
5 for generating steam, and

a housing including a space formed therein to receive a portion
of said container, and including at least one spacer extended into
said space thereof, to engage with said container, and to form an air
passage between said container and said housing, and said housing
10 including a plurality of apertures formed therein for air circulating
purposes.

2. The steam cleaner as claimed in claim 1, wherein said
container includes a lower casing and an upper casing disposed in
said chamber of said container to receive said steam generator in
15 said lower and said upper casings.

3. The steam cleaner as claimed in claim 1, wherein said
container includes a front portion having a tube provided therein,
and having an opening formed in said tube, said steam generator
includes an outlet port received in said opening of said tube.

20 4. A steam cleaner comprising:
a container including a chamber formed therein, and including
a front portion,

a steam generator received in said chamber of said container
for generating steam, and
25 a nozzle detachably attached to said front portion of said
container for outwardly supplying the steam.

5. The steam cleaner as claimed in claim 4, wherein said

container includes a tube provided in said front portion thereof, and having an opening formed in said tube, said nozzle includes a pipe extended rearwardly therefrom and selectively engageable into said opening of said tube of said container.

5 6. The steam cleaner as claimed in claim 5, wherein said tube of said container includes a lock notch formed therein, said pipe of said nozzle includes a spring blade having a catch 43 extended therefrom and engageable into said lock notch of said tube, and to detachably lock said pipe of said nozzle to said tube of said
10 container.

 7. A steam cleaner comprising:
 a container including a chamber formed therein, and including a rear portion,
 a steam generator received in said chamber of said container
15 for generating steam, and
 an extension shank detachably attached to said rear portion of said container.

 8. The steam cleaner as claimed in claim 7, wherein said container includes a handle provided in said rear portion thereof,
20 said extension shank is selectively engageable into said handle of said container.

 9. The steam cleaner as claimed in claim 8, wherein said handle of said container includes a hole formed therein, said extension shank includes a spring biased latch engageable into said
25 hole of said handle, and to detachably lock said extension shank to said handle of said container.
